

DATA SHEET

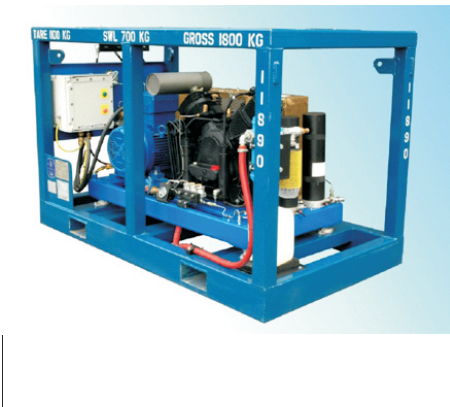

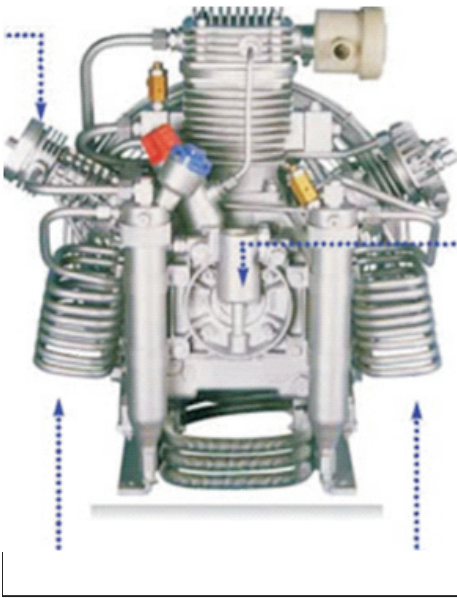

Breathing Air Compressor

Breathing air compressor systems from Sabre Safety offer you various packaged solutions for your high pressure breathing air requirements.

Each package includes a choice of drive, (engine or electric), skid based including DNV, or silent within a noise reduced enclosure.

With performance capabilities from 100 litres per minute to in excess of 4000 litres per minute and working pressures to 414 barg we have the machine to suit your application. Units are also supplied with filtration or drying packages that provide breathing air to recognised standards including En12021.

Specialised packaged systems include full ExD (ATEX) certification, suitable for use in offshore hazardous locations.
