

SABRE SAFETY LTD DATA SHEET

LOW PRESSURE WARNING WHISTLE

Warns breathing apparatus wearers, using the Cascade airline system, of a loss of air pressure in the system and to activate their reserve air supplies.

- Stainless steel quick connections allow the Low Pressure Warning Whistle to be fitted at various locations on the low pressure airline system.
- The whistle is activated if the low pressure airline supply drops below 4.1 bar.
- A robust and simple to install unit with the minimum of moving parts making it very easy to service and maintain.
